4th of January 2010.

Dear Shareholders,

In Hungary, they have fitted our H-Booster into a Mercedes Spinter 2.5 diesel 18+1 seat.

The test drive was from Pecs to Budapest to Pecs. On this journey without the H-Booster it consumed 48 Ltrs, H-Booster fitted it used 44 Ltrs, saving of 10%. When the H-Booster was fitted it was filled with too much acid, therefore we adjusted it and hope to have even better fuel savings. Test we are continuing and let you know the outcome as we have it.

The results are positive but it appears that they did the test with too much caustic soda in the system, hence there will be a new test that should give us far greater results.

The system is a great news for saving energy and reduce CO2 !!

Francesco Fucilla
